

- The RS-MS1A app communicates with Icom Transceivers (ID-5100A; ID-51A PLUS) over Bluetooth® or the OPC-2350LU data cable.
- Your Android™ Device must be USB Host Mode compatible to communicate with the Icom Transceiver over the OPC-2350LU cable. If your device is not compatible, it cannot be upgraded for USB Host Mode capability.
- Not all Android devices that have USB ports support the USB Host Mode feature.
- When an USB/OTG (On The Go) cable is plugged into an Android that supports USB Mode, the device will automatically recognize the cable and install the appropriate drivers. Please check with the device manufacturer for more information.
